

2021 United Nations Decade
2030 of Ocean Science
for Sustainable Development

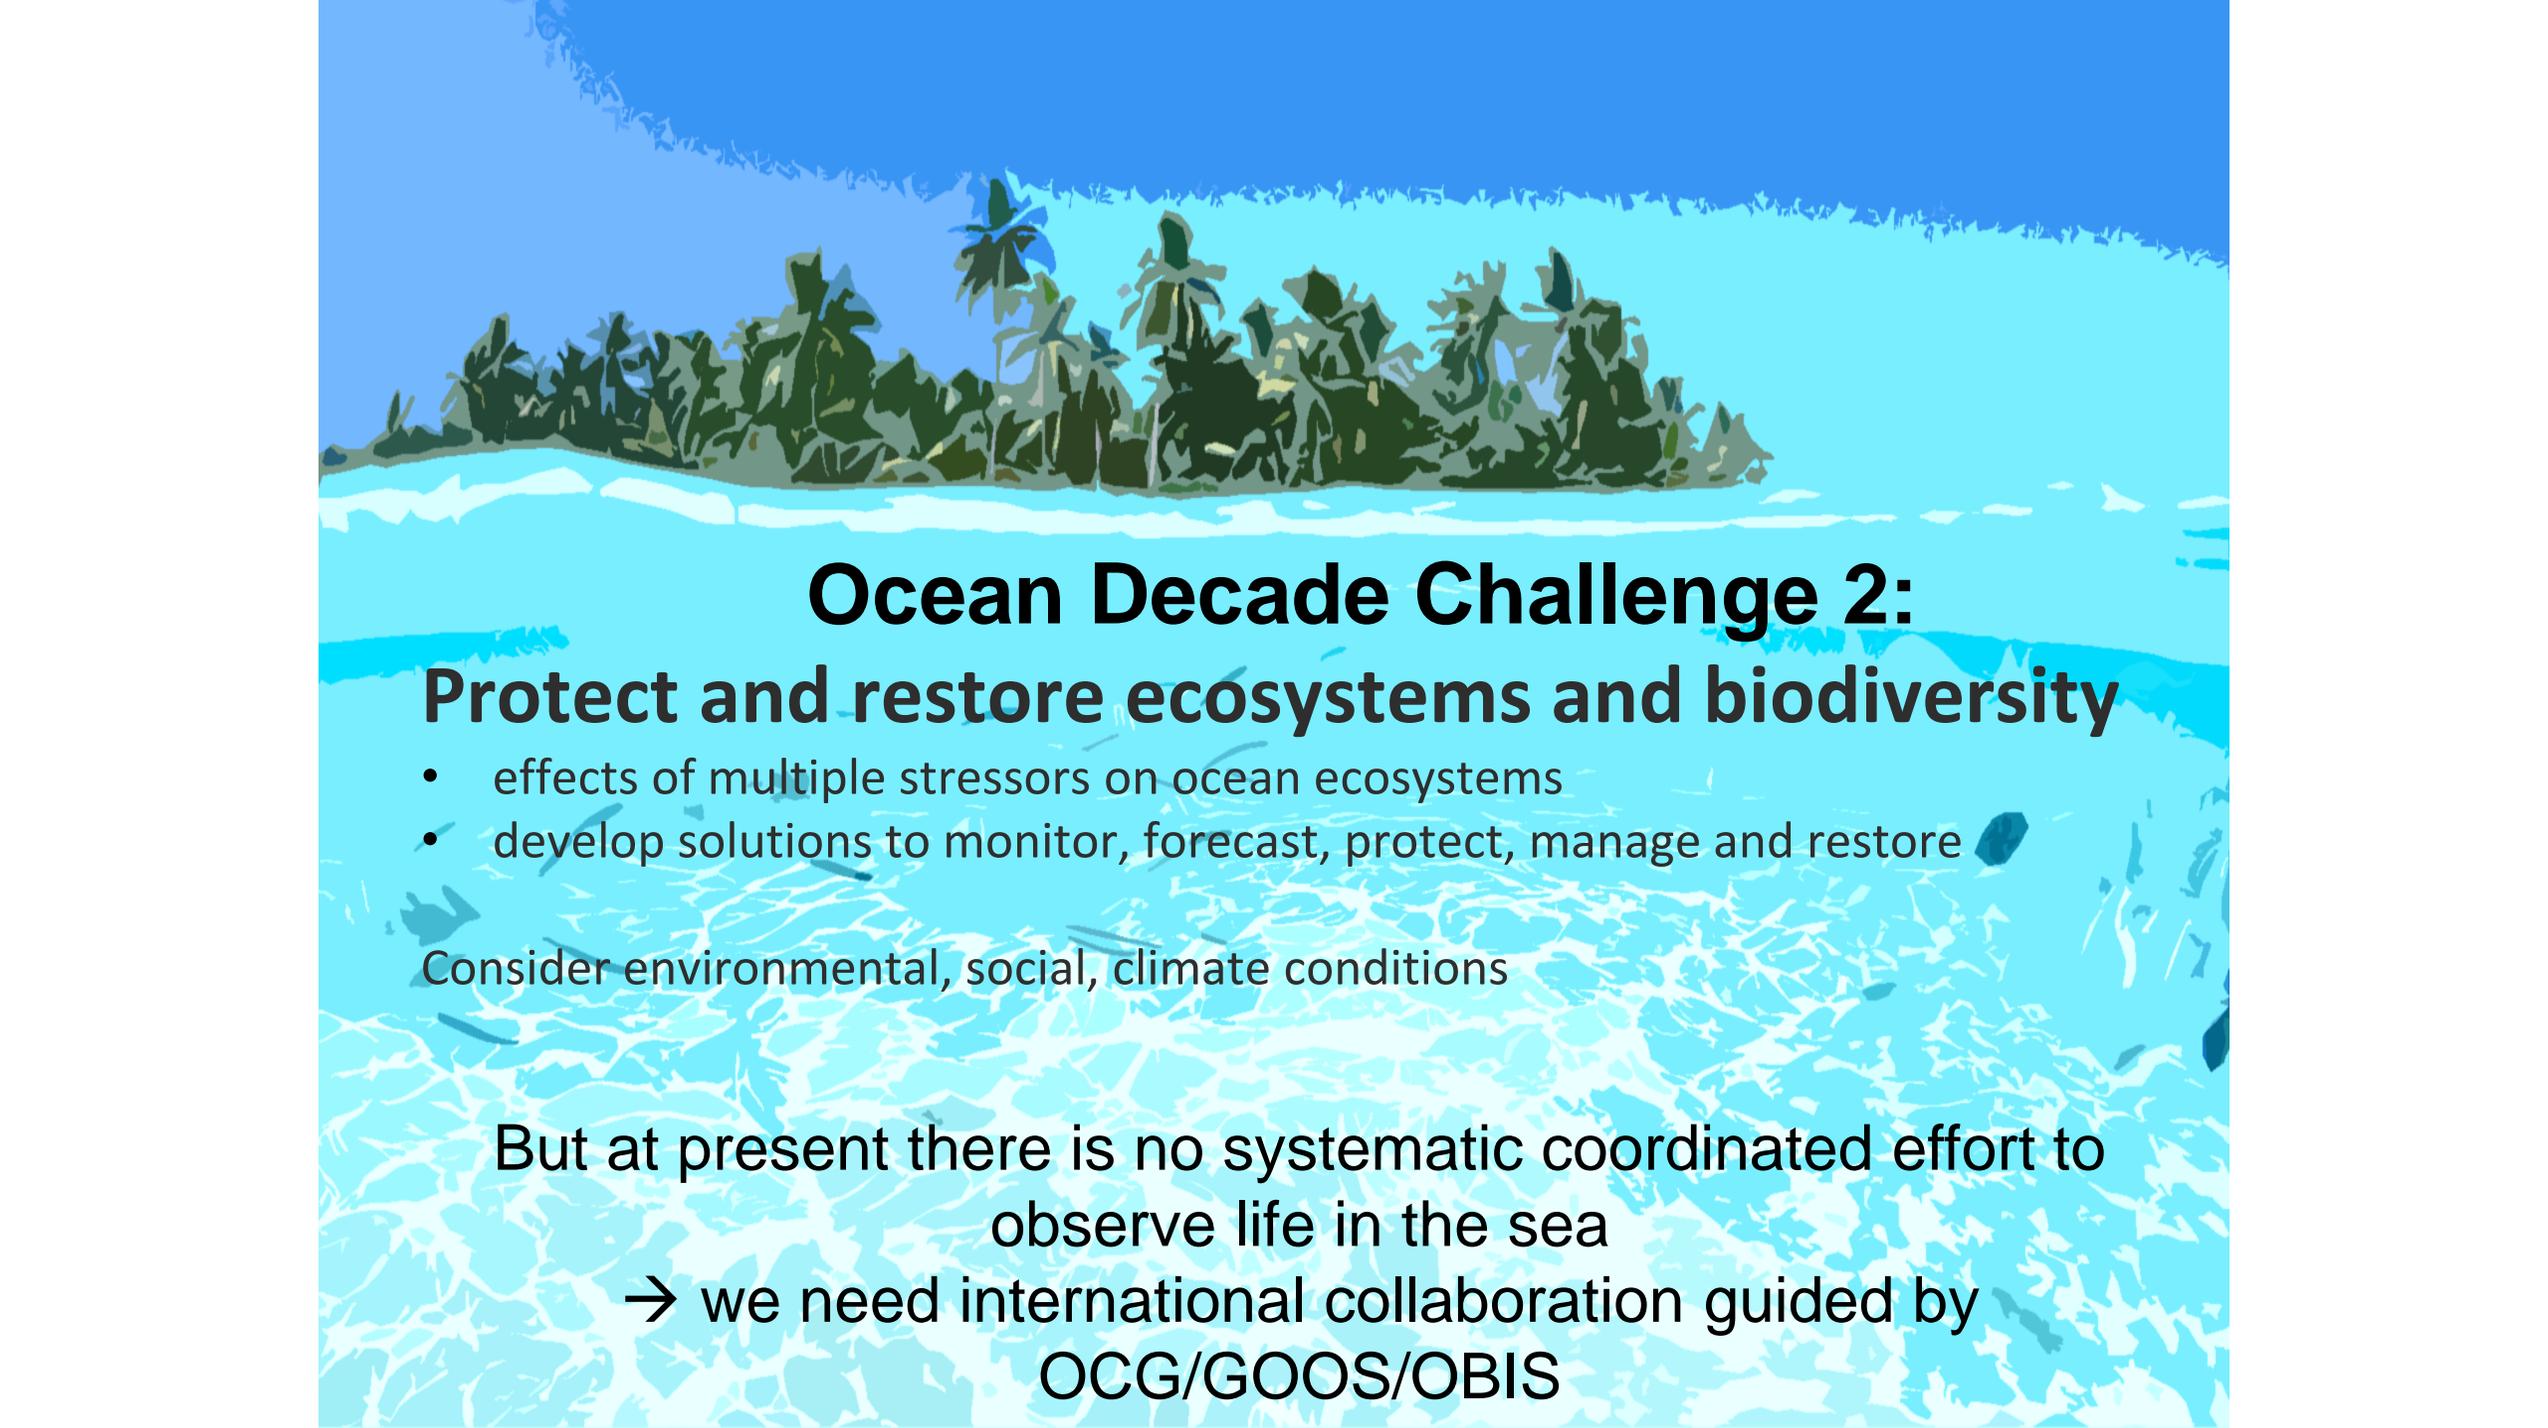

Marine Life 2030

MBON
Marine Biodiversity
Observation Network

Building global knowledge of marine life for local action

<https://marinelife2030.org>

Ocean Decade Challenge 2: Protect and restore ecosystems and biodiversity

- effects of multiple stressors on ocean ecosystems
- develop solutions to monitor, forecast, protect, manage and restore

Consider environmental, social, climate conditions

But at present there is no systematic coordinated effort to
observe life in the sea

→ we need international collaboration guided by
OCG/GOOS/OBIS

Needs:

OCG and GOOS can help:

- Plan for integration of basic biological-ecosystem EOVS observations into GOOS RAs/local programs
- Advance adoption of data collection standards and forecasting in a co-design framework
- Identify
 - users and EOVS requirements
 - Minimal observing requirements: local, regional, global
 - Advance data management (e.g., operational GOOS-OBIS link)

Thank You!
